Hello, again! – The iPhone/Gold Ratio 2024

Image rights: Kim Stovring, Flickr

‘Hello again’, I simply say, ‘hello again’.

Howard Carpendale

“For the third consecutive year, Apple has not only kept iPhone prices steady but decreased them!” – This is what the headlines would read if you paid for your iPhone with gold. The iPhone 16 Pro with 1 TB of memory costs just 0.60 ounces of gold, which is 23% less than last year’s 0.78 ounces of gold for the iPhone 15 Pro, since the price of gold in US dollars has risen by an impressive 30.8% in the last 12 months, recording numerous new all-time highs since December 2023.¹

Compared to 2022, the price of an iPhone measured in gold fell by almost a third, and compared to 2018 this year’s iPhone is almost 50% cheaper. 2018 was the only year a gold investor had to spend more than 1 ounce of gold for a brand new iPhone, as the price of an iPhone X amounted to 1.13 ounces of gold. Only in 2010, 2011, and 2012 was the respective new iPhone model cheaper than this year, when priced in gold. The average price since 2007 is 0.74 ounces of gold.

Adam Sandler

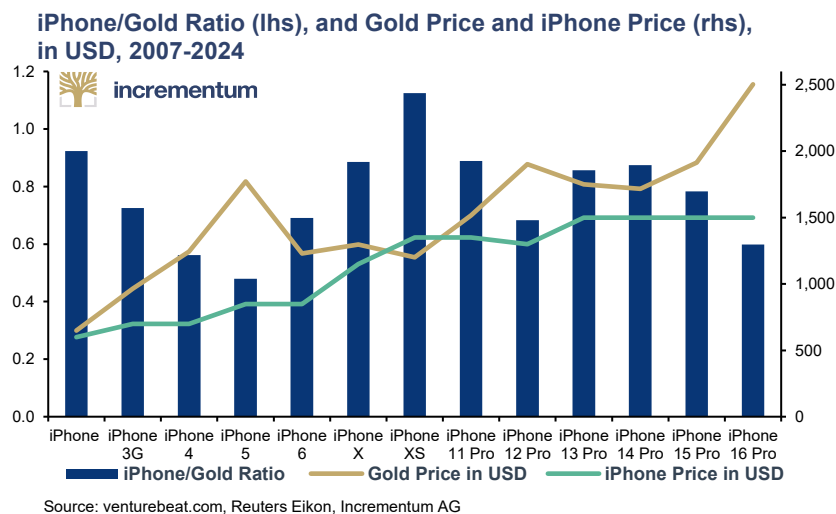

As a gold investor, you actually have to spend significantly less gold on the current iPhone than you did 17 years ago. The very first iPhone cost 0.92 ounces of gold in 2007. For this lesser amount of gold, however, you get much more iPhone. The current iPhone 16 Pro only has the name in common with the original iPhone. The performance of the iPhone 16 is completely different to that of the first iPhone generation. The performance improvements over the past 17 years have indeed been enormous.

Cameras	1	2	2	3	3 x
Battery	1150 mAh	1440 mAh	3174 mAh	3577 mAh	3.1 x
Resolution	480 x 320 (163 ppi)	640 x 1136 (326 ppi)	2436 x 1125 (458 ppi)	2622 x 1206 (460 ppi)	2.8 x

However, sales expectations are subdued due to the delay in Apple’s AI functions. The hype surrounding the new iPhone is therefore likely to fall short of previous years this year. In the EU, Apple’s AI function, called *Apple Intelligence*, will initially not be available at all. Apple cites the strict regulations of the EU’s Digital Markets Act (DMA) as the reason for its temporary unavailability in the EU.

Buyers who do not invest in gold are also certainly pleased about the recent lack of a price increase – the third non-increase in a row – especially in view of the strong inflation in recent years. But stable prices are definitely different from falling prices. As in 2021, 2022 and 2023, the price of the Pro model with the largest available storage (1 TB) is USD 1,499. Compared to the very first iPhone, which was launched in 2007 for USD 599, the price has increased by 150%. This corresponds to an annual iPhone inflation rate of 5.5%.

Those who rely on US dollar fiat currency get less and less iPhone for their money every year. Gold investors, on the other hand, benefit from the fact that the price of gold has risen by almost 290% in the iPhone era.

Key Takeaways

Calculated in gold, the new iPhone is significantly cheaper than in previous years. The iPhone 16 Pro is available for 0.60 ounces of gold, while the iPhone 15 Pro was 23% more expensive at 0.78 ounces of gold. The first iPhone cost 0.92 ounces of gold in 2007, making it more than a third more expensive.

This further significant decline in the price of an iPhone expressed in gold this year comes as no surprise at all, given the fact that gold in US dollars has recorded numerous new all-time highs since December 2023, rallying more than 30% since the publication of the iPhone/gold ratio 2023.

A gold investor today receives a technologically significantly more powerful iPhone than in each previous year, and for significantly less gold than in past years. Since the high in 2018, the only year an iPhone cost more than 1 ounce, at 1.13 ounces of gold, the price of an iPhone measured in gold has fallen by almost 50%.

Expressed in US dollars, however, the price of an iPhone has risen by 150% since 2007, even though this is the third time the price has not been increased despite the wave of inflation in recent years. Nevertheless, the average annual iPhone inflation rate since 2007 has been 5.5%.
